Biodiversity conservation and ecosystem services ensure the well-being of coastal communities

- Thriving and stable ecosystems
- Providing food security
- Reduction of poverty
- Safeguarding traditional systems of life

Improving the health of Chile’s diverse coastal marine ecosystems

- Maintenance and recovery of fish stocks
- Securing jobs and diversifying productive activities
- Secure and maintain the ecosystem services

Sustainable management of marine resources
- Decrease in illegal, unreported and unregulated fishing (IUU)
- Improve knowledge of the link between biodiversity and ecosystem services, climate change, and human well-being

Efficient and effective stewardship, control, surveillance and monitoring
- Integration between fishing policies and practices
- Capacity building

Optimal management of marine resources
- Marine coastal governance includes local actors in decision-making process
